Questions from June 2013 Tech Webinar   **Presented by: Jonathan McNatty**

Title: USING P6 R8.3 VISUALIZER TO CREATE SCHEDULE GRAPHICS

#	Question	Answer
1	Q: The dates are greyed out - can you change the start and finish date	The dates are grayed because of the type of date that is being selected. Because the Start Date, Data Date, and Finish Dates are already established it will show as grayed out in the Visualizer software. Once you choose "Custom" Date" the date field will display the calendar and a specific date can be chosen.
2	Q: How much is the cost to upgrade from P6 version 7.5 to 8.3?	It depends on your current License Maintenance. To clarify, if your maintenance is current, there may be the ability to migrate to 8.3 at no additonal cost. If your maintenance is not current, there are steps and processes that need to be followed to migrate.
3	Q: Is there the ability to do rolling dates - for example DD + 2wk for a lookahead?	On the Timescale tab it DOES NOT allow to do rolling dates. What you could do is set up a filter that could be applied to the layout that would have the DD + 2WK Look ahead.
4	Q: Is Visulaizer an extra cost?	NO, it is part of P6 R8.3 Software.
5	Q: Will the Privavera P6 Visualizer be included in the P6 9.0 version	That would be a question for Oracle but we would not see any reason why they would not include the Visualizer functionality in future versions of P6.
6	Q: Is there a way to hide certain portions of a bar to save space. For example, a one hundred day activity would show days 1-5 and then days 95-100. The rest would be hidden. The bar would show as a broken line similiar to drafting standards.	We have not found any feature that allows to hide certain parts of the bar.
7	Q: On a enterprise system do changes made in P6 Professional show up in real time in Visualizer?	YES, you can have P6 R8.3 open and as an example delete an activiy and have Visualizer open at the same time and once you click "Refresh" in Visualizer it will accept the changes made in P6 R8.3.
8	Q: Can you set bar labels to automatically move the left end of the bar at the right side of the page like P3, rather than having them run off the page like in P6?	NO the bars are set to show on the timescale in Visualizer by each page.
9	Q: Can you set manual page breaks like in P3?	On the Page Setup tab you CAN NOT set manual page breaks.

10	Q: Are filters in Visualizer unique from filters in P6? Can you access and modify P6 created filters from Visualizer?	Visualizer can see Filters created in P6 under the "User" but does not seem to see Project or Global filters. The layout can then be accessed in Visualizer and you can use the Options to modify the layout in Visualizer.
11	Q: A lot of projects are done out of sequence. How would the timescaled diagram show a baseline vs. actual bar when there is a gap of month or more? Would it just have no other activity between, and just use more lines as need?	It shows the gap without an activity between the activities.
12	Q: Is flowline diagram possible? now? in the future?	We have not found any Flowline Diagram feature in Visualizer, we would need to ask Oracle about having in the future.
