

Title: IS Primavera Contract Management (PCM) Still Alive?

#	Question	Answer
1	Do you offer a Hosted PCM client app option to take Java off the customer's to do list?	Yes. Running PCM in a Terminal Server environment or a full Citrix environment can isolate the Java issues. Our experience has been that all versions of CM run slower within a TS/Citrix environment.
2	We still use CM 11, how do we migrate to 14.1?	You need to work with a Primavera Partner to submit your serial #'s/CSI # to the PGBU Channel Manager who works with the Oracle Migration Team to develop a cost and benefit for migration that is good for 30 days.
3	Does 14.1 provide any new integration with P6?	No, unfortunately.
4	How can I modify forms and reports in 14.1?	You will need either the BI Reports Desktop tool or the BI Reports Developer tool and direct access to the CM 14 database - preferably in a test/development environment.
5	Are there any issues with forms and reports in 14.1?	Some known issues are that paragraph breaks in text aren't always recognized. If you build your forms using BI Desktop this issue can be resolved, but default forms are not built this way so you would have to rebuild them yourself.
6	Can I run CM 14.1 stand alone?	Technically, if your machine is equal to a heavy duty gaming machine you could probably do it. 14.1 uses Oracle WebLogic for the web server. Oracle recommends that smaller firms have CM14 hosted.
7	Does CM 14.1 run on a mobile device?	Not really. CM14 requires Java. Apple devices do not support it. Surface Pro with Win 8 can support it on a tablet. Using an iPad app "Jump" which acts like a terminal server allows the use of iPads by running Java in the terminal server rather than directly on the iPad. All require internet connectivity--no offline access.
8	What types of documents are supported with MLM's Contract Management Interface?	Submittals, Change Proposals, RFI's, General correspondence, Daily Reports and Notices.
9	What does CMI cost?	CMI is available from DRMcNatty on a cloud SaaS basis (Software as a Service). It starts with Tier 1 - \$500 per month for up to 10 hosted users, \$750 per month for up to 10 non-hosted users.
