

#	Question	Answer
1	Is the Knowledge Library built in out of the box, or is it based on the projects we bring in or create?	The Knowledge Library is built from your own organizational knowledge. It can contain previous projects, as-built imported from Primavera/MS Project or you can create knowledge and standards from scratch in BASIS. BASIS is smart enough to analyze the quality of historical projects in the Library too.
2	What tools set integrate with Basis?	Primavera, MS Project, Excel, Deltek Acumen
3	Can the created file be exported to P6? Also, can a current schedule be brought in from P6?	Yes and yes. Whole projects or parts of projects can be imported/exported.
4	Is the product available to be used on a mobile device? Smartphone or tablet?	The product is platform neutral and can be used on any device that can access internet.
5	Is the data elements real-time, when there are more than 1 person in the same project at the same time?	Yes, a team member gets to see the impact of their changes in real time on the rest of the project but they are doing so in their own sandbox so that users don't trample on each other.
6	How can a start up (with not much past experience) make best use of this product?	Start with the markup process and then simply add 1 or 2 historical projects to the Knowledge Library or start with a simple list of benchmark durations
7	If you have a library of P6 schedules, can you upload them to create the knowledge database/library?	Yes, your schedules can be loaded to create your own knowledge library.
