

# TECH TIP

# MARCH 2020 UNIFIER & BI PUBLISHER ADDING UNIFIER IMAGES TO CUSTOM OR EXTERNAL REPORTS IN BI PUBLISHER

When creating custom reports it is sometimes desirable to display images in my report which have been inserted into a Unifier record. These could be field images and inserted into daily reports or could be map images for a project status report just to illustrate two examples. This tip shows you the steps to perform this.

# Background

Unifier enables images to be included in Business Process templates as an Image Picker.

0	RACLE <sup>®</sup> Prin	nave	era	Ur	nifier	(De	evelop	ment	t)							6	-

The image itself is stored in a directory like https://**[unifier-server-address]**/bluedoor/rest/image where [unifier-server-address] is the implementation specific server address. What is shown in the Project Update Image field is a number corresponding to the image id.

The objective is to present that image in a report as shown below.

The following steps will walk through managing this using a BI Publisher Rich Text Format (RTF) template:

- 1. Adding Unifier variables to the BI Publisher Data Model as parameters
- 2. Defining the "security\_token" in the XDM file
- 3. Creating the variables in the Word document as Text Form Fields
- 4. Adding an ActiveX Control Image to the RTF

This process assumes the data model and rtf template already exist and you are adding to them.

#### **BI Publisher Parameters**

There are 3 Unifier variables that need to be defined as parameters in the BI Publisher Data Model to handle the security and identify the location of the image: uuu\_p\_companyRegistryF, uuu\_p\_sessionIdF, and uuu\_p\_urlF.

ORACLE <sup>®</sup> BI Publisher Ente	erprise	All	v		୍ Adn	ninistration H	
DM_PROJSTATUS			Ho	ime	Catalog	New 💌	Open 💌
				Mana	age Private	Data Sources   Vi	ew Data Crea
Data Model	Parameters						
Properties	+ ×						
Data Sets	*Name	Data Type	Default Value	Parame	ter Type	Row Placement	Reorder
SCHED PROJCOST	uuu_p_source_i ×	String -		Text	•	1	<b>*</b>
PROJSTAT	uuu_p_companyRe	String 🔻		Text	•	1 🚔	<b>*</b>
<pre>security_token </pre> Event Triggers	uuu_p_sessionIdF	String		Text	•	1	<b>AV</b>
Flexfields	uuu_p_urlF	String 💌		Text	•	1 🚖	
<ul> <li>▲ List of Values</li> <li>▲ Parameters</li> <li>[=]]uuu_p_source_id</li> <li>[=]]uuu_p_companyRegistryF</li> <li>[=]]uuu_p_sessionIdF</li> <li>[=]]uuu_p_urlF</li> </ul>							
▲ Bursting				-			

Add these three as data type "String". In the example above you will notice uuu\_p\_source\_id which is used to identify the record that initiated the print request and is not needed specifically to display the image.

In the code for the dateset, define the image id field. For our example, we are using the Monthly Update Business Process, and the view contains the ID field K\_UMUPROJECTP.

In this example the dataset would contain:

"UNIFIER\_UMU\_VIEW"."K\_\_UMUPROJECTP" as "PROJIMAGEID"

#### XDM Define "security\_token"

In the XDM code, the "security\_token" parameter needs to be defined. Download the Data Mode and unzip it to access the XDM file and open it using Notepad.

If you search for parameters you will find the items identified in the Data Model.

<pre> <eventtriggers></eventtriggers> <lexicals></lexicals> <parameter datatype="xsd:string" name="uuu_p_source_id" rowplacement="1"></parameter></pre>	File Ec	dit Format View Help

<pre><pre><pre><pre><pre><pre><pre>cinput/&gt; </pre></pre></pre></pre></pre></pre></pre>		
<pre></pre>		<pre><parameter datatype="xsd:string" name="uuu_p_urlF" rowplacement="1"></parameter></pre>
  <bursting></bursting> <display></display>		<input/>
<pre>kbursting/&gt; kdisplay&gt;</pre>	<td>parameters&gt;</td>	parameters>
<display></display>	< bu	ursting/>
	<di< td=""><td>isplay&gt;</td></di<>	isplay>

Return to the top and search for <datasets>. Define "security\_token" by adding the following code under that line. Start copy after - - -

--- End copy before

Save the changes and archive or zip the file to a file with suffix .xdmz. Import it back into BI Publisher.

# **RTF Set Up Text Form Fields**

The same 3 variables need to be defined in the RTF template.

Export sample data and import it into the RTF template.

Insert and define 3 Text Form Fields using the Developer tab and selecting Legacy Tools / Text Form Field.

Once created, double click each field and define the code for each one as follows:

?PROJNAME?>			Bl Publisher Properties	×	?TITLE
			Code		
Taylor Ju	Reporting Month:	STA	k?variable@begin:UUU_P_COMPANYREGISTRYF; (//UUU_P_COMPANYREGISTRYF)[1]?>	^	<u>get</u>
	Supervisorial District:	DIS	······································		
THE CON-UPIA	Project Title:	PRO		Ē	
4	Specifications No.:	PRO		÷	
Los Angeles	Job Number:	JOE			DATE
National Mus.	CEO Analyst:	CEC		1	CPNO
With EStation	Fund Manager/Defacto:	FUN		H	-
PARTIN LARTING	Project Manager:	PRO		F	<u>a</u>
IGELES E GIN SP				1	
HON RICT	Address:	CA			_DATE
a B chins		ECO		- 1	RACTOR
		ECO			P DATE
		ECO		~ [	HITECT
Dject Description:			Text to display COMPANYREGISTRYF		
ROJDESC					
irrent Status:					
IMMARY				_	

URLF : <?variable@begin:UUU\_P\_URLF;(.//UUU\_P\_URLF)[1]?> SESSIONIDF: <?variable@begin:UUU\_P\_SESSIONIDF;(.//UUU\_P\_SESSIONIDF)[1]?> COMPANYREGISTRYF: <?variable@begin:UUU\_P\_COMPANYREGISTRYF;(.//UUU\_P\_COMPANYREGISTRYF)[1]?>

#### Adding ActiveX Control Image to RTF

Insert a picture by selecting Insert / Picture and browsing to an image similar in size to the one that will be replacing it.

Right-click on the image and select Format Control.

In the Alt Text field enter the following in the Description section:

```
Start copy after - - -
Description:
url:{concat($UUU_P_URLF,'companyRegistry=',$UUU_P_COMPANYREGISTRYF,'&sessionId
=',$UUU_P_SESSIONIDF,'&id=',PROJIMAGEID)}
- - - End copy before
```

Replace **PROJIMAGEID** with the data model field containing the image id.

Format Picture	? ×
Fill	Alt Text
Line Color	<u>T</u> itle:
Line Style	
Shadow	Description:
Reflection	Description: url:{concat(\$UUU_P_URLF,'companyRegistry=', \$UUU_P_COMPANYREGISTRYF,'&sessionId=',
Glow and Soft Edges	\$UUU_P_SESSIONIDF,'&id=',PROJIMAGEID)}
3-D Format	
3-D Rotation	
Picture Corrections	Titles and descriptions provide alternative, text-based representations of the information contained in tables, diagrams,
Picture Color	images, and other objects. This information is useful for people
Artistic Effects	understand the object.
Crop	A title can be read to a person with a disability and is used to
Text Box	determine whether they wish to hear the description of the content.
Alt Text	
	Close

Save the file and load it back into BI Publisher.

NOTE: You won't be able to see the image by running the PDF directly from the RTF. It will need to be run through Unifier to pull the parameter values and link to the actual image.

# Wrap Up

If this is an External Report, moving the RTF back into and existing BI Publisher Template will automatically make it available to Unifier. If it is a Custom Report, the Data Model and Template will need to be downloaded and imported back into Unifier.
