OVERVIEW

Tri-State Generation and Transmission Association, Inc. is a cooperative of 45 members, including 42 electric distribution cooperatives and public power districts in four states that together provide power to more than a million electricity consumers across nearly 200,000 square miles of the West.

In 2014 Burns & McDonnell was asked by their client tri-state generation to take over the hosting of their P6 platform from another vendor that they were dissatisfied with.

Burns & McDonnell contracted the hosting to DRMcNatty & Associates.

CHALLENGES

To migrate the clients existing Primavera deployment from a third party environment with a minimum impact on the clients daily operations. Additionally the client wanted a stable and functional environment without the delays and impacts that were experienced with their previous vendor.

SOLUTION

The P6 Managed Hosting Solution was setup to support up to 50 users in P6 EPPM (Web), up to 25 users in P6 Professional (Client) and up to 50 users of Team Member (Mobile & Web). The P6 platform was migrated from a previously outside hosted environment to DRMcNatty's Datacenters and the platforms were upgraded to a more current version of P6. DRMcNatty setup a Managed Hosting Solution for Burns & McDonnell to utilize Oracle Primavera P6 EPPM (Web), P6 Professional (Client) and P6 Team Member (Mobile & Web).

RESULTS

The system was quickly deployed by the DRM team with the switch over by users being a simple change in UR. The client was pleased with the operation and expanded the system to include a custom report writer and project team access to the EPPM Team Member module. At the end of Burns & McDonnell's engagement with Tri-State, the client (Tri-State) contracted directly with DRMcNatty & Associates to continue operation of the system.
