CASE STUDY

LA Metro PMIS Dashboard

DRMcNatty delivered a user-friendly, public-facing dashboard to report on Measure R project results. The dashboard pulled data from existing systems and allowed management checks before publication, helping the public to engage with the project and enhancing the LA Metro reputation for transparency.

OVERVIEW

DRMcNatty and Associates, Inc., (DRMcNatty) assisted LA Metro to implement a program management system that included various Oracle Primavera tools. These tools were further enhanced via data integration to the LA Metro accounting system. LA Metro has been utilizing these tools to manage their Measure R and other program-wide efforts.

CHALLENGES

LA Metro identified a need to publish select information from these data sources in a publicly accessible dashboard

The Dashboard content is actively pulled on a regular basis from the internal PMIS tools. This information must then be reviewed and corrections made prior to public consumption, and the Dashboard design must provide the tools to publish versions and also track the publication information for auditing purposes.

SOLUTION

DRMcNatty designed the dashboard interface to pull in key program and detail-level data that can be published as a publicly accessible web-view. Dashboard would consist of simple elements/portlets, and the data would be published in a clearly defined workflow process. Projects are organized into portfolios—currently only representing Measure R projects, but can be also used to include other projects/portfolios.
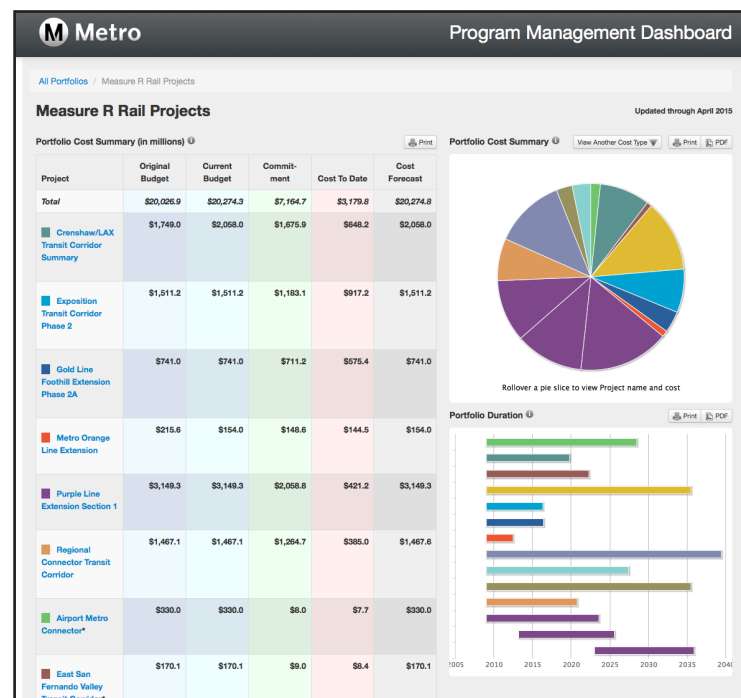

RESULTS

LA Metro is now publishing Measure R data to the public. This provides monthly progress reporting to the general public based on live

information in the PMIS systems, and can also benefit LA Metro internally as a means to audit information found in the PMIS systems.
